

**EXAMPLE:**

## **5. Curriculum Integration**

Curriculum integration with technology is addressed and implemented through the use of curriculum mapping in alignment to the content standards and supported by technology for student learning. This is a specific part of our Consolidated Application.

At present our district is continuing to work on integration already in place. So far our math classes are using online math programs to reinforce skills. Language Arts classes are developing skills using publishing software, Microsoft Word, and Photoshop.

Staff trainings and workshops designed to integrate technology are scheduled throughout the year. New hardware and software integration into the classroom researched by any staff member will be shared with other staff members to facilitate peer curriculum technology integration throughout the district. The technology plan is used as a tool and used to relate it towards the Title II Consolidated Application/School Improvement Plan in order maintain the level of our technology.

Teachers and staff will have time during regular staff meetings to discuss the technical side support for curriculum integration. On a daily basis the school's technology person will provide technical support.

We currently have one room in which our DDN equipment is set up. This room is accessible to all staff and students for scheduled session. We have used DDN for student classes, special programming and teacher training on a very limited basis. In compliance with our Consolidated Application we have scheduled four high school classes being offered over the DDN and three teacher training sessions along with numerous elementary level one-time offered programs.
